Hiring Team
Hewlett Packard Enterprise
Jakarta, Indonesia

Dear HPE Hiring Team,

When HPE describes turning data into outcomes at the speed required to thrive, I recognise that challenge precisely: at Traveloka I built real-time data synchronisation pipelines and structured-logging infrastructure feeding Google BigQuery analytics dashboards, closing the gap between raw operational events and the decisions that flight-operations teams acted on daily. That direct line between cloud infrastructure and business insight is what draws me to HPE's APAC Graduate Development Program — starting August 2026, aligned exactly with my expected graduation from the University of Indonesia.

One of Traveloka's largest flight inventory partners had no automated reschedule path — operators manually processed thousands of booking modifications every day, introducing delays and compounding errors at scale. I spent time first mapping the partner's full technical workflow, then designed and shipped an end-to-end automation pipeline on Google Cloud Platform with configurable scrapers, failover backup mechanisms, and Kubernetes-orchestrated deployment; the solution processed modifications with **99.9% accuracy** and reduced manual intervention by **85%**. The engineering was non-trivial, but the decision that unlocked it was understanding the customer's infrastructure constraints before writing a single line of code — exactly the kind of thinking a Presales engineer applies every day.

HPE's focus on Data Centre Technologies — spanning cloud architectures, containerisation, security, and sustainable IT — maps directly to the stack I have been building with in production: GCP, Docker, Kubernetes, AES-GCM encryption, and CI/CD pipelines at Traveloka, complemented by enterprise application work at PT Magna Solusi Indonesia. What genuinely interests me about the sustainability dimension of this role is not abstract: as an LPDP Scholarship Awardee at the NTU Summer Programme 2025, I applied software engineering principles to real environmental challenges alongside peers from across the region, producing an architecture proposal for a specific sustainability problem — a lens I would bring directly into conversations with HPE's enterprise customers.

I would welcome the chance to discuss how my background in cloud infrastructure, enterprise automation, and cross-functional technical communication maps to the challenges HPE's customers face across the APAC region. I am looking forward to exploring this opportunity further.

Sincerely,

Musthofa Joko Anggoro

University of Indonesia, Fasilkom · Information Systems · GPA 3.84/4.00 · Expected graduation June–August 2026
